Toine van Bostelen
DATA SCIENTIST

ABOUT ME

New to the field of Data Science, but able to draw on a broad academic and entrepreneurial background. I've always had a natural ability to find patterns and use my analytical mind to connect the dots. I love to dig deep into a problem and get to the essence of a it. As a former entrepreneur I'm able to turn the root cause of a problem into an opportunity for growth. The red line throughout my career is to work hands-on with sustainability to make strategic changes for the betterment of business and environment. It's my ambition to leverage big data to make a sustainable impact to our future.
